OTTO SIMON Expands and Moves to Larger Offices

OTTO SIMON Ltd is a forward looking process engineering company that is certainly doing something right. Not only have they just moved into new head quarters in Cheadle, Cheshire, but they have over the last year expanded their company by 40%. They have achieved this by recruiting some of the very best engineers in the business, with significant experience in thermal treatment and related technologies.

OTTO SIMON offers consultancy and design/build services. They have 35 experienced engineers working on a wide range of thermal treatment and heat recovery projects across the globe. Currently they are working in Taiwan, Japan, China, South America, Middle East, Australia as well as many projects closer to home here in the UK.

The projects range from feasibility studies through to design, procurement, construction and commissioning. The thermal treatment and energy projects include gasification of SRF, upgrade/optimisation of incineration facilities, new gas cleaning facilities and associated effluent treatment, coke oven plants, problem solving of sludge drying plants and heat recovery/power generation.

Mr Steve Haywood MD of OTTO SIMON said “The reason for our success is that we always put our customers first. We pride ourselves on fully understanding our customers’ problems and having the appropriate expertise, skills and flexibility to offer innovative, practical and cost effective solutions.”
